

# BUILDING AN ONLINE STORE CONSIDERATIONS

*Things to remember and prepare for now that you are building an online store*

Now that you are building your own store, you will need to think about and **prepare various information** so that the store development can go **smoothly** and without backs and forths. Think about your **payment methods** and especially if you need a **Credit Card e-pos redirection module**.

If you do, contact a bank and join a program for a redirection module, purchase the required payment gateway plugins and start the tests. Same for **shipping and costs**, select your model based on what your shipping company offers you and **provide detailed info** to your developer.

---

## PREPARE AND THINK ABOUT

---

### PAY

How your clients will pay online? Deposits, cash on delivery, paypal and standard payment methods? **If you want a CC e-pos redirection module, you first need a contract with a bank.**

### SHIP

Think about your **shipping methods** and costs, ideally, the dev will need **a list of areas and weight ranges and corresponding costs** for each class in order to set them up.

### OFFER

Think about what types of **offers** and interactions with the client you will need to suppose on your online store so the dev can prepare them prior to launch, you can add later too.

---

**ITS IMPORTANT FOR SUCH INFO TO BE PREPARED FOR THE SHOP DEVELOPMENT**

---
